# Practical No.: - 10

**Aim:** Introduction to GitHub, creating a remote repository and adding a file to it using GitHub.

**Theory:-**

**What is GitHub?**

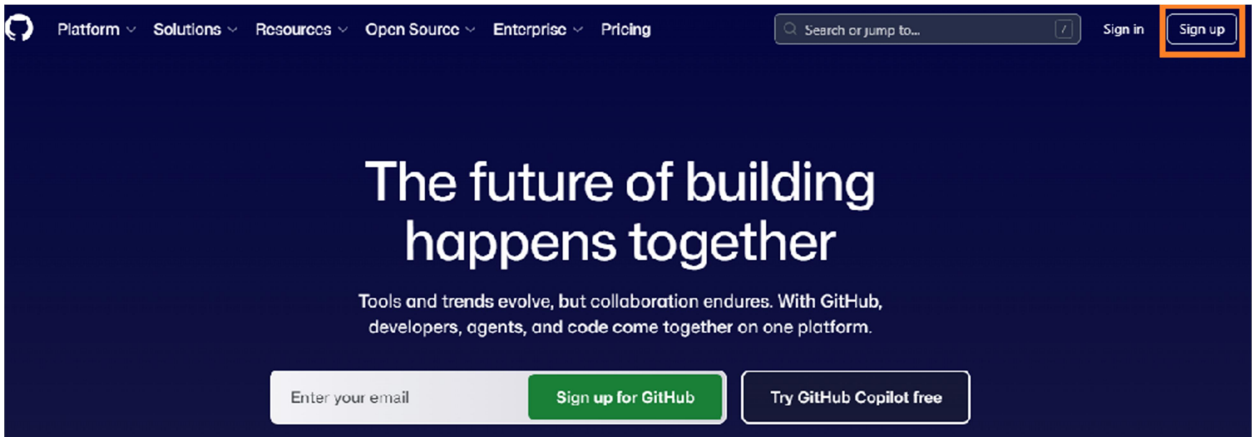
GitHub is a web-based platform used to store, manage, and share source code using version control. It allows multiple users to collaborate on projects, track changes, and maintain different versions of files.

**Key Features of GitHub**

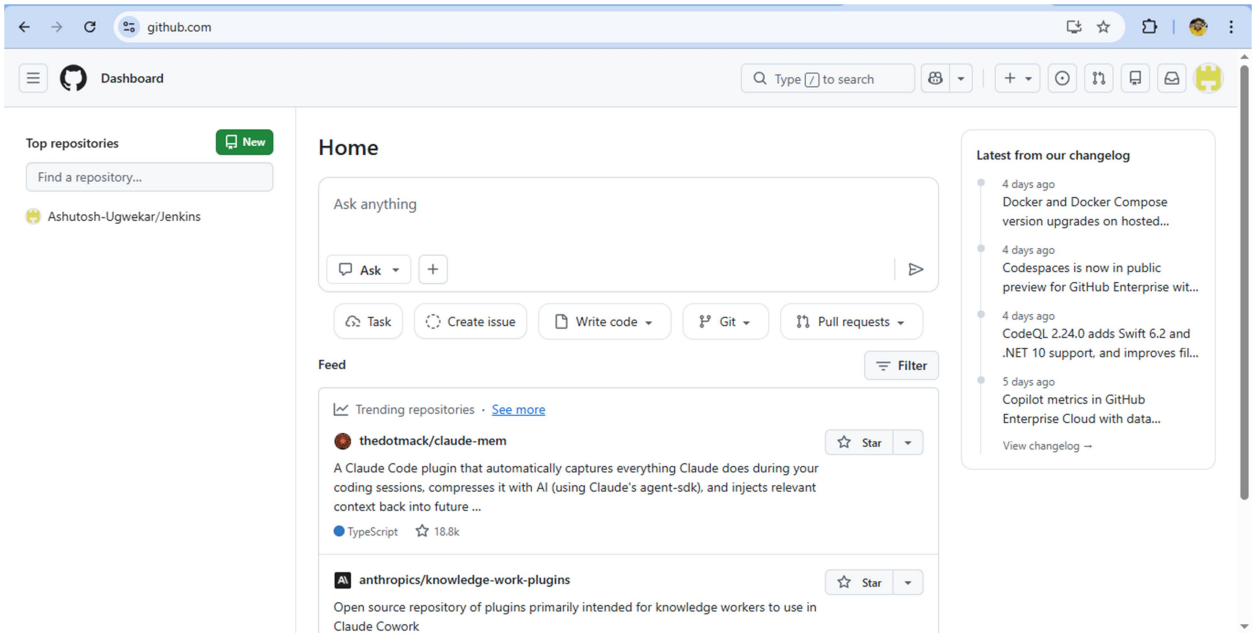
- Online code hosting
- Version history tracking
- Collaboration with teams
- Issue tracking
- Pull requests and reviews
- Open-source project hosting

**How to Create a Free GitHub Account**

1. Open a web browser and go to https://github.com/ and click on '**Sign up**'.

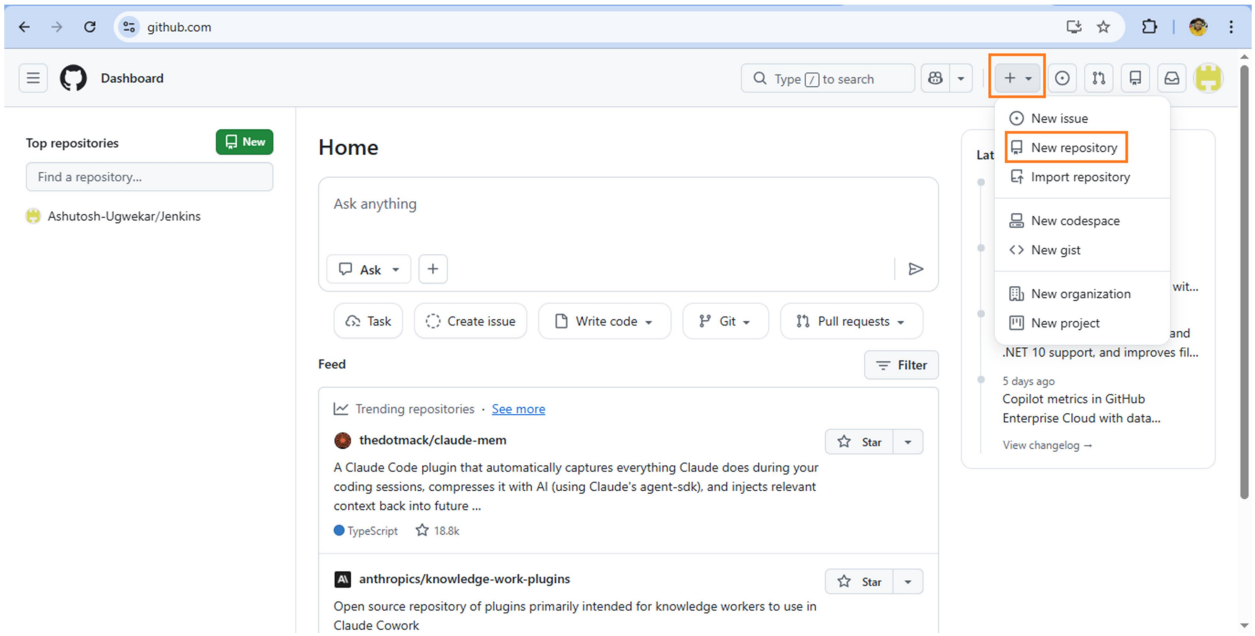


2. Enter the details, verify your email address (if required) and complete the account setup. After successful registration, the GitHub dashboard will appear as shown below.

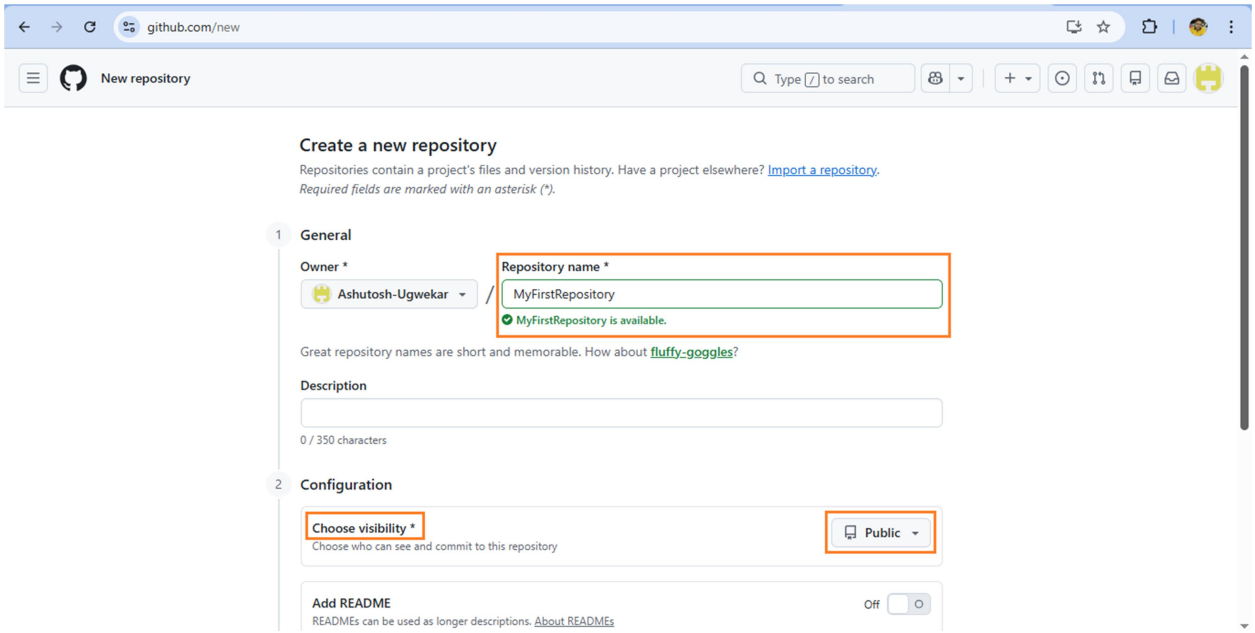


## How to Create a Repository on GitHub

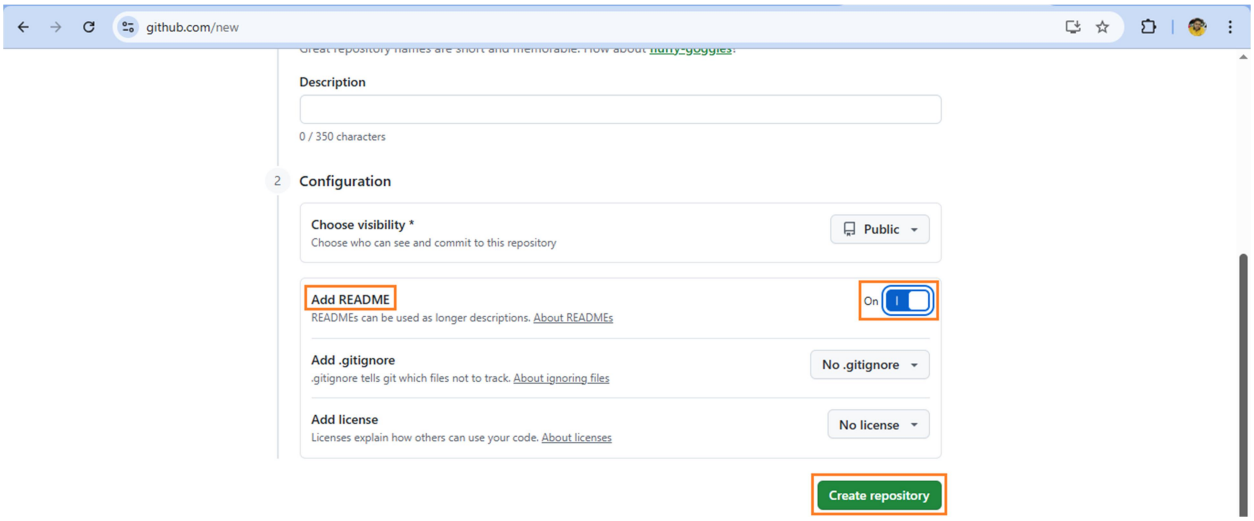
1. Login to your GitHub account and click on the **"+"** icon (top-right corner).



2. Enter repository name (e.g., **MyFirstRepository**) and choose visibility as "**Public**".

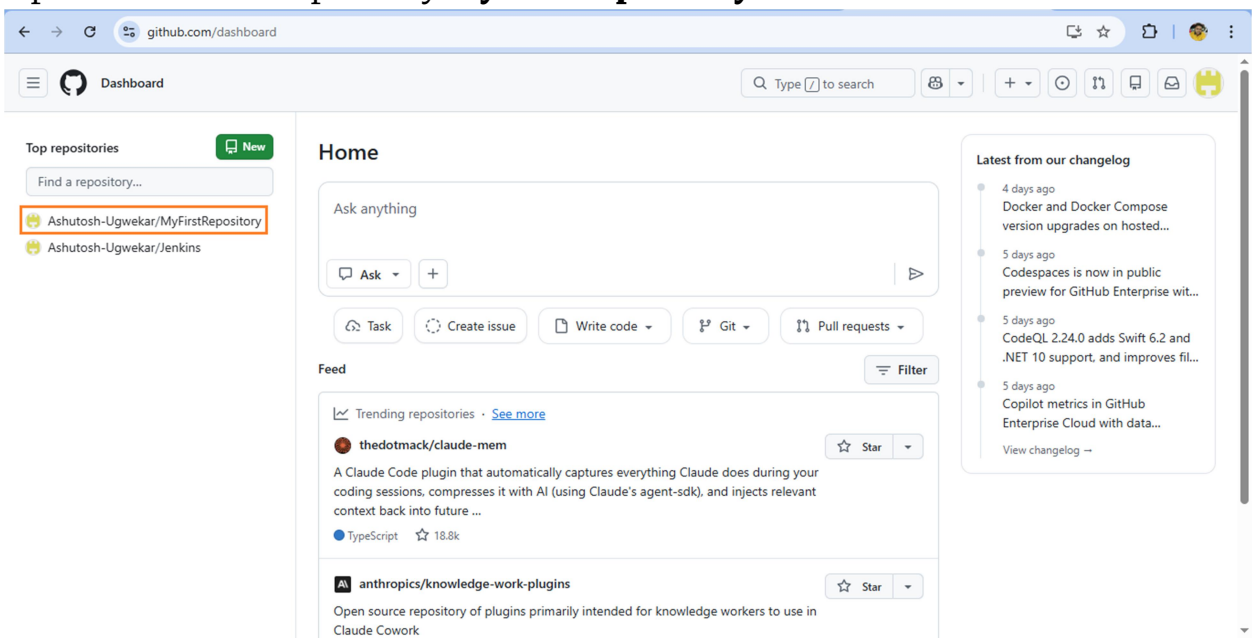


3. Select "**Add README**" and click "**Create repository**".

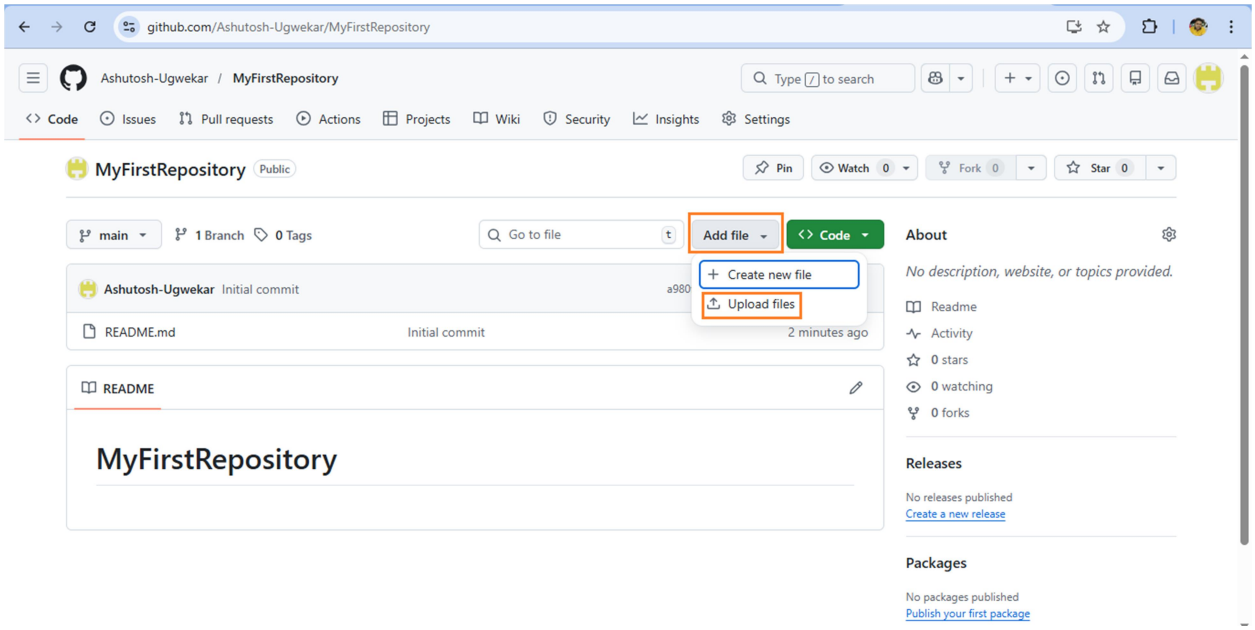


## Uploading Files to GitHub

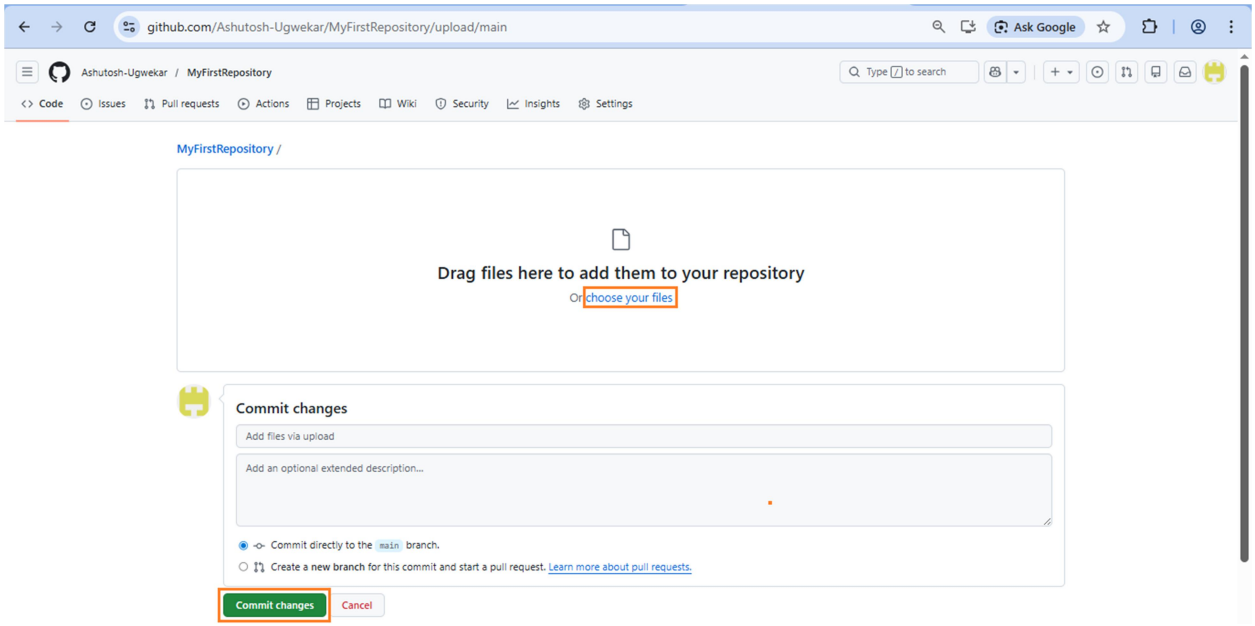
1. Open the created repository **MyFirstRepository**.

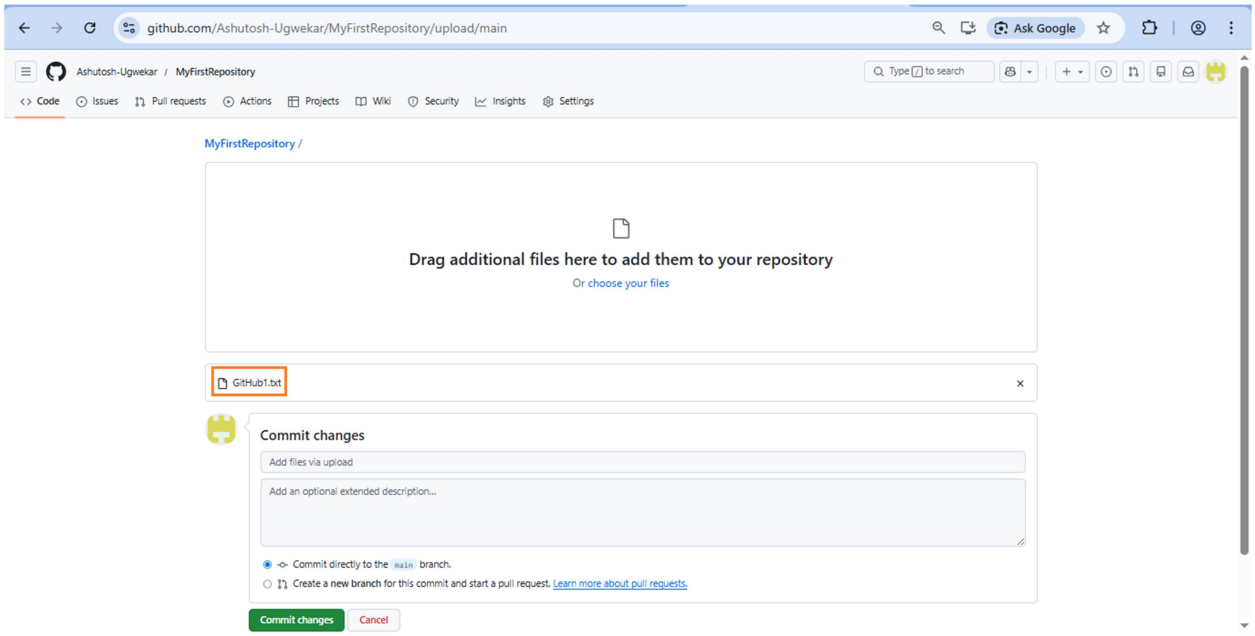


2. Click on "**Add file**" and select "**Upload Files**"..

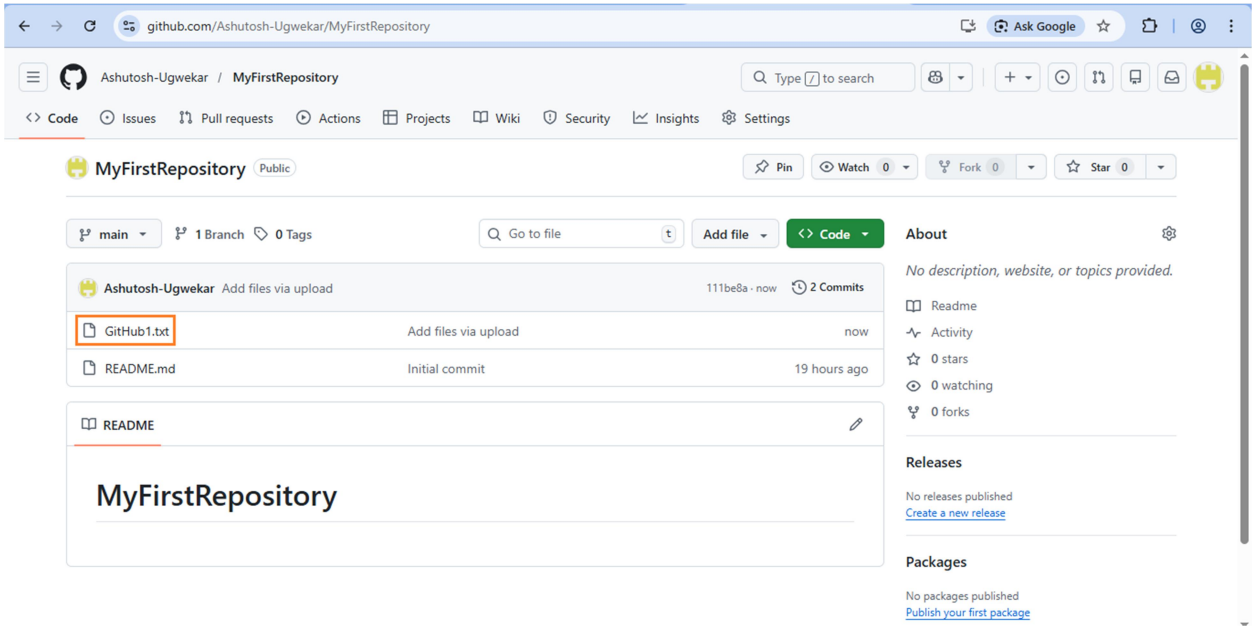


3. Choose a file from your computer and Click *Commit changes*.





The file will now be stored in the GitHub repository.



**Conclusion:**

Thus we have studied GitHub, created a remote repository and added a file to it using GitHub.
